VIOLETTA

Passion. Never untwined.

Value can only come from a Challenge.

Think of ways to do it rather than reasons why you can't. Violetta's culture and motto is "manufacturing that never says no". Rather than simply making what is ordered, we want to respond with value that exceeds expectations. All staff members are working together as a team to meet this challenge. For the sake of customer trust and end-user satisfaction we believe that there are things only we can do as a company that has focused on R&D since its establishment.

Violetta's History -
A History of Innovation

Violetta's journey began with an innovation - the development of the first domestic raschel machine. Since its establishment, the company has always pioneered the development of new materials and obtained numerous patents for knitted fabrics. The strength of Violetta lies in its 100 years of experience and technology, as well as its DNA filled with continuous challenge and innovation. We create materials never existed before and bring about new innovations in the industry.

"MADE BY VIOLETTA" to a Global Brand

Violetta collaborates with global companies to deliver products to people around the world. Looking ahead to the next 100 years, we are now beginning to take on new challenges beyond the traditional supplier business. Further strengthening material and development capabilities with the aim of becoming "MADE BY VIOLETTA" beloved around the world.

Violetta will mark its 100th anniversary in 2027. Accordingly, the company set the slogan "Innovation, Evolution, by RASCHEL" and has begun to take actions toward the next 100 years to come.

We started with the innovation of developing the first domestic raschel machine, and have deepened it throughout our 100 years of history. As a company "born and bred for innovation," our goal for the next centennial is to achieve Evolution. We will expand our business domain by maximizing the manufacturing function and also providing a trading company function.

While further evolving its mainstay raschel fabrics, the company will practice a hybrid management of engineering and commerce to transform itself into a comprehensive textile manufacturer.

However, the evolution we are aiming for is not simply the expansion of our business domain. We pursue what we can do based on the technology and know-how we have accumulated over the years and the DNA of Violetta that runs through our veins. In other words, we aim for the evolution by deepening past experiences and achievements. We believe that only with a thick trunk that has been nurtured for a century can branches and leaves grow and new flowers bloom.

Corporate management is "Succession and Prosperity". Violetta will continue to rise to the challenges with the belief that we must always continue to be flourished.

100 years of experience and technology

Environmental Initiatives

Sustainability initiative is one of the key challenges for companies in the textile industry. Violetta is committed to various initiatives to contribute to society through its business activities. We will also continue to strive for a better future by contributing to community through the development of innovative new materials and reducing our environmental footprint with supply chain enhancement.

- Dyeing Process without Hazardous Chemicals
- Use of Eco-Friendly Raw Materials and Chemicals
- Material Development with Eco-Friendly Raw Materials (yarns)
- Promotion of Smart Factory Implementation
- Research and Development of New Knitting Technology
- In-House Product Testing Laboratory
